

VOX URANIAE

OR,

An { ASTROLOGICAL
ASTRONOMICAL } Essay,
{ METEOROLOGICAL }

For the Year of our Lord God, 1684.

And from the World's Creation according to
the best of Histories, 5633.

Being Bissextile, or Leap-Year.

Wherein is contained.

The Scheme of the World's Revolution, modest Predictions of
the general Affairs of several Parts of *Europe*, *Lunations*,
Eclipses, *Monthly Observations*: a Table of the Tides,
Terms, and their Returns, the rising and setting of the *Sun*
and *Moon*, together with her *Southings* and *Configurations*
to the other *Planets*; as also something touching the Influ-
ence of the late *Comet*, and *Conjunctions* of *Saturn* and *Ju-*
piter, with useful Tables, and other things fitting such a Sub-
ject. Accommodated and referred properly to the Meridian
of the August and Famous City of *London*, whose *Zenith*
is distant from the *Aequator* Northward 51 deg. 32 min.
yet it may indifferently serve any part of *England*,
Scotland and *Ireland*.

By DANIEL WOODWARD.

Professor of Physick and Astrology.

*Si scire via veram splendissimam & gloriosissimam Solis Excellentiam,
pallidam Lunam & Stellarum influentiam, ceterorumque
Collectionem Dei Omnipotentis operum Scientiam, Astrologia
pudeat.*

LONDON, Printed by J. D. for the Company
of STATIONERS, 1684.

TO HIS

Real Worthy, and Ingenious Friend,

(That most Loyal Gentleman)

Capt. CHARLES CARTER

OF YARMOUTH,

IN THE

County of NORFOLK.

Daniel Woodward

In Testimony of the Honour and Respect he bears Him, most humbly dedicates the succeeding Astrological Predictions, for the Year, 1684. Wishing unto Him all External, Internal, and Eternal Health and Happiness.

Ad Lectorem.

Courteous Reader.

Finding what I have formerly emitted to the World has been generally very kindly accepted, encouraged me to publish more of the same nature; wherein I have endeavoured to oblige my honest Country-Men with most things fitting such a subject. Here I have presented my Reader with a modest Con-
 jecture of the State of the whole Year; that is, of what Trans-
 actions may probably happen from the beginning to the end. Meteorological Predictions as exact as Art and Experience will admit; the Diurnal Rising and Setting of the Sun, the Luna-
 tions; the Nocturnal rising and setting of the Moon; also the time of her southing, precisely calculated with Latitude: A Table of the Tides, requisite to know the exact time of High-
 Water at most Havens about England. The good and evil Configurations of the Moon to Saturn, Jupiter, Mars, Sol, Ve-
 nus, and Mercury during the whole Year, which is mightily no-
 ted and observed by many Persons in their particular Affairs; and good reason for it too: with several other things too tedious here to rehearse, in regard I made short mention thereof in the Title Page; but if some of these things appear not so much like an Arrist as should have been, or as may (God willing) another Year; let me be excused, for I never knew so much
 mental Disturbance through Sickness and loss of Friends since the moment of my Nativity, as I have done from the begin-
 ning of October 82, to the latter end of June 1683. Where-
 fore once more, I crave my ingenuous Reader's Pardon. I need not tell him a dissatisfied and troubled Genius cannot dis-
 creet as is ought; besides he that publishes his Astrological Conceptions to the World, must be very cautious, especially in such dubious, plotting times, he hath more ado to frame his Discourse that it may not be offensive to any party, nor seems over than he hath to unfold the full Portents of all the Schemes needfull for his use.

Natus Comitatu
 Glocestriæ pro-
 pe Bristoliam.

D. WOODWARD.

Carmina in Laudem Astronomiae.

L Et *Mome* and *Zois* together sit and prate,
VVhilst thou o'th'future Years predict the Fate;
Let them plod on, their Pens and Tongues advance,
Art's greatest Foe's known to be Ignorance.
Whilst they endeavour the World to enrage,
Thou teachest us their Envy to assuage.
The rising and the setting of the Moon;
Also her southing, and her Place at Noon;
Chronos's Envy and *Jove*'s Piety;
Bold *Mars*'s Fury thou dost here discry;
Sol's Magnanimity and *Venus*'s Lust;
Sly *Seaborn*'s Treachery, and *Luna*'s Gust;
Together with mensurnal Observations,
The Lunar Aspects and Lunations.
Go on great Soul! th'World on thy Fame shall ring,
Fountains of Profit from thy Labours spring.

Misch. Houldsworth, Philomath.

To his faithful, and most esteemed Friend, Mr. Daniel
Woodward, on his ingenious **VOX BRANIE.**

Sure your Extatick Soul has trac'd the Sky,
Where it has read all its Divinity.
The glorious Workmanship all o're did see,
And thence came down to inform Humanity:
Or by the lower Heaven of your Mind,
The Constellations of the upper find.
Jove's Closet you unlock, and do declare
The most retired Secrets acted there.
You are our Oracle, and can relate
The various mazes of ambiguous Fate;
The glorious Sun, and paler *Cynthia* too,
Do not act the least unknown to you.
Go on, and by your future Industry,
Convert all Atheists into Astrology.

E. Firlin, Student in Astrology.

*A short Chronological Table of some things worthy of
Note since the Birth of Christ to this present Year, 1684.*

T he Birth of Christ	1684
Christ died on the Cross	1651
England first received the Christian Faith	1507
Scotland first received the Christian Faith	1481
The Tower of London built	1115
The Daves first came into England	666
Westminster-Hall built	1184
The Conquest of England by D. <i>will</i> the Conqueror.	616
St. Paul's Church in London built	596
London Bridge built with Stone	495
The first Mayor of London	458
The Invention of Guns	244
Coaches first invented in England	146
The Royal Exchange first built	119
A Plague in London, whereof died 30,98	81
The Gundpowder-treason November 5	79
A Plague in London, whereof did 35418	54
A great Plague in Cambridge	52
The Earl of Strafford beheaded	43
The great Fight at Edg-hill	41
Brainford Fight	41
Newbury first Fight September 22d.	40
Newbury 1 cond Fight	39
The fatal Battel at Naseby June the 14th	39
King Charles the First martyr'd	36
Cromwell died September 3d	26
General Monk marched to London	25
King Charles II, arrived in London, May 29th	24
Harrison and the rest of the Regicides were executed,	24
King Charles II. crown'd April 23d.	24
King Charles II. married	22
The first great Sea-Fight with the Dutch	19
The Plague in Lond. whereof died 68586, in all 97351	19
The Fire in Lon. on Sep. 2, 3, & 4, consuming 13200 ho.	18
London rebuilt	17
Last Peace concluded with the Dure's	16
The Discovery of the late Popish Plot	16
The Earl of Stafford beheaded on Tower hill	3

By this Table and the help of Addition, you may compute the Interest of any Sum whatsoever, from a day to a year, &c. And for the greater exactness, the Penny is divided into 4 parts, so that 25 Parts are a Farthing, &c. This Table is so easy (the Premises being well considered) it needs no Example

January hath XXXI Days.

Kind Reader, I thy Pardon freely ask,
 For what's amiss in this my annual Task.
 Rejoyce brave *England*, farewell Eighty Three;
Pandora's Box hath spild its Misery.
 Yet those *Conjunctions Comets* passed o're,
 Denote strange things for twenty Years and more.

February hath XXIX Days.

The Devil's loose, the World's become a Cheat,
 All kind of Goodness most Men nauseate.
 Such horrid times are these, that scarce a Man
 Dares not to say (or think) his Soul's his own:
 But mark the end, Ambition will not do,
 God's Wrath's invoked, and Displeasure too.

March hath XXXI Days.

Behold my Friends ! see how fair *Venus* courts
 The frigid *Saturn* to her lustful Sports;
 And is resolv'd a touch to try with *Jove*;
 For such small Crimes, she's term'd the Queen of Love,
 Man's Sins are open, but his *Sorrow*'s hid,
 He doth not drench his Couch as *David* did.

April hath XXX Days.

Five famous *Trin* this one brave Month doth bring,
Pray haik how sweet their Influence doth ring,
Honours conferr'd on Men of small Renown,
And angry *Mars* doth at old *Chroum* frown.

Hence follows Quarrels and Domettick VVo;
Nature contends for to withstand her Foe.

The beginning of the Month
(I doubt bringe: h ill News to the
Marchant of some great Loss and
Damage that he hath suffered not
long since at Sea. Things go ve-
ry ill and unlucky with many of
the Inhabitants of *Ireland*, espe-
cially about *Dublin*, but after
they have past some of the Effects
of the great Conjunctions of *Sa-*
turn and *Jupiter*, and of the late
prodigious *Comet*, fortunate and
auspicious days appear, the Sun
shining again bright in their *Me-*
ridian. God Almighty send for-
tunate and happy days to *Eng-*
land. Many of the long Robe
receive greater Preferment then
ever they expected; for here
are some excellent Configurati-
ons, and I hope produce as excel-
lent Effects. The two Superiours
are now direct, whose Influence
operates to purpose: Near the
end of the Month many ill things
are acted, and men's Passions
strangely elevated: However thi
Month in general proves not ill
for *London*, and the West and
South West parts of *England*.

South West parts of England.

May hath XXXI Days.

God bless us all; the fragrant month of *May*,
The splendid Stars our present Hopes destroy.
Be patient Friends, and wait, Time will declare;
Yet eight Years more, then better things appear.

Mars in the *Twins* to *London* doth presage,
Ill Fires, Murders, Curse on this Hellish Age.

June hath XXX Days.

Old fullen *Saturn* doth the *Lyon* change,
 In the sign *Virgo* now he takes his Range;
 Bids *Rome*, fair *Italy*, and all farewell;
 Of his Effects his Holiness may tell.
 Unwholsome Air, violent Storms at hand,
 Rain, Hail, and Thunder, naught for Sea and Land.

20	2 45	5 48	and Lightning, and many Cor-	3509
21	3 31	6 35	ruscations in the Air. Strange	3519
22	4 19	7 22	chopping and changing amongst	3519
23	5 3	8 6	several Persons, and that when	3529
24	5 39	8 42	some of them least suspect it. The	3539
25	6 23	9 26	Courts of Princes are fill'd with	3539
26	7 4	0 7	Trouble, &c. and Mens Bodies	3549
27	7 49	10 52	strangely afflicted with Diseases,	3549
28	8 32	11 35	Fevers, Measles, and small Pox:	3559
29	9 20	12 23	God preserve us from the Plague,	3569
30	10 11	1 af. 14	I doubt its approaching.	3569

July hath XXXI Days.

The pale-fac'd *Mo.n* deprives the famous *Sun*.
 Of's glorious Lustre on the *British* Throne.
 Great *Mysteris* God hath reveal'd to man;
 His Prescience can treat of things to come.

The Wisdom's great which treats of natural things;
 But greater's that Coelestial Wildom brings.

August hath XXXI Days.

Could Man with *Sol* the Golden Road pass o're,
View Nature's Secrets, he might say much more
Than now he can. Sly *Hermes* doth conjoyn
With *Fore*, old *Chronus*, and the glorious *Sun*.
The active Man's at work, Strife to create,
Malice and Hatred lurk within his Pate.

September hath XXX Days.

This Month's not so active as some that's past;
Mars through the *Lion* passeth in great haste.
 Swift Actions and swift things seem to be done,
 Fore in the Ballance joyneth with the *Scales*.
 God grant us Peace though't bears so great a Prize,
 May *England* have it tho' she pay Excise.

October hath XXXI Dayes.

The most of this Month's Actions (truly Friend)
 Are cursed Cheats, and damned Plots attend:
 For Tory *Mavors* cloth with *Chronus* joyn;
 When those two *Vipers* meet, great Mischief's done.
 But Gentlemen, you of the plotting Crew,
 Pray act most wary, lest you for it rue.

First quarter 5 day, 29 min. past 11 Morning.
Full Moon 13 day, 11 min. past 9 Morning.
Last quarter 21 day, 9 min. past 11 Morning.
New Moon 28 day, 54 min. past 4 Morning.

		Moon's		High		Observations.	☉ rise & set.	
		South'g.		Water.				
3	1	2	at. 43	5	at. 46	There is one sort of People, that shall near these times, render themselves very troublesome and ridiculous to. the World, their Inclination's nothing but Strife and Contention. ☿ comes to the ☿ of ♄ in ♍; the Inhabitants of <i>France</i> are once more strangely threatened; and if their present King hath 22 degrees of the sign in ascending, then this ☿ falls exactly upon the degree culminating at his Nativity, and will denote a strange Catastrophe of the Honour of that potent Monarch, and some eminent Trouble in that Kingdom soon to follow: Oh the Cheats and Tricks that are now acting! The City of <i>London</i> may be somewhat concern'd in the Effects of this ☿; but O Lord, preserve his Majesty of <i>Great Britain</i> , and grant him a long and prosperous Reign—! Many Persons extremely troubled with the <i>Cholick</i> and many linger out their days with Grief and Melancholy: the Honour of some brave flourishing Lady is much questioned.	6 35 6	6 38 6

November hath XXX Days.

Respendent *Sol* kindly saluteth *Jove*,
 But first he's courted by the Queen of *Love*:
 And from th' *Archer* on *Mars* projects his Beams,
 Much good ensues these influential Streams,
 Did not old *Chronus* with's Malefick Rays,
 Disturb the greater World so many ways.

New Moon 26 day, 52 min. past 2 Afternoon.

Day	Moon's Southing	High Water.	Observations.	O rise 5 feet.
1	4 at. 26	7 at. 29	The Configurations of this Month tend generally to the good of Mankind; and were it not for a stubborn, discontented Generation, fine things would be brought to pass. The Weather at the beginning seems very mo- derate; all the Coelestial Wan- derers are direct in motion. Most People of <i>Europe</i> are very active and mindful of defending them- selves against the Assaults of their Enemies: if the Territories of <i>England</i> are but free of Enemies at home, what need hath she to fear the Malice of Forreign. Wherefore I hope she will remain unconcern'd. The <i>Londoners</i> for the most part, have good trading, very wellcome and pleasant In- telligence comes from several parts, the Merchants advanc'd by their happy and fortunate Re- turns. <i>Spain</i> near this time, not a little concern'd in mundane Affairs, very considerable mat- ters that have been long conceal'd under Consideration.	7 34 5

December hath XXXI Days.

Mars in the Ballance can't with *Jove* agree,
 About some VVrongs receiv'd, and Liberty.
 The Theatres made the Gamsters play their Prize,
 As he may prove that loves such Mysteries.
 Mean while I will rouse up my drouzy Muse,
 'Gainst Eighty Five, t'inform you better News.

The Kalendar explained.

The Left-hand Page hath twelve Columns, the division on the top of these Columns contain some *Poetical Observations*: the first Column shews the days of the Month; the second the Week Days; the third the *Festivals*, both *fixed* and *movable*, beginning and ending of the *Terms*, with what Alterations in the Air may probably happen; the fourth, the Moon's Rising and Setting, with Latitude in Hours and Minutes, viz. her setting from the Change to the Full, and her rising from the Full to the Change, M. denotes the Morning, and Af. the Afternoon; the fifth Column the Moon's Aspects to *Saturn*, the sixth to *Jupiter*, the seventh to *Mars*, &c. The eleventh the Moon's place in the *Zodiack* every day at Noon, vulgarly called the Sign; the twelfth and last, the Moon's Age.

The Right-hand Page hath five Columns, the Top-Division of this Page shews the Lunations, viz. the *New*, *Full*, *First* and *Last Quarters* of the Moon; the first Column the Month Days again repeated; the second the Moon's Southing for every day through each Month, with Latitude in Hours and Minutes, the only Foundation to find the precise time of *High-Water* at most Havens in and about *England*, as by the following Table will appear, M. and Af. signifying as aforesaid; the third the Hours and Minutes when it's *High-Water* at *London-Bridge*; the fourth Astrological Observations; the fifth, the Sun's rising and setting; where note as many Minutes as the Sun riseth after the Hour noted in the Morning, so many Minutes he sets before the Hour noted at Night.

As for Example. *May 12.* the Sun riseth 6 minutes after 4 of the Clock in the Morning; and sets 6 minutes before 8, or 54 min. after 7, which is all one; for subduct 4 hours 6 min. from 12 hours, there will remain 7 hours 54 min. the exact time the Sun sets in the Horizon of *London*, as before.

The Explanation of the Names, and Characters of the 12 Signs of the *Zodiack*, and 7 Planets; together with the Planets Aspects; as also the *Dragons Head* and *Tail*, for the better understanding of the foregoing Kalendar.

♈ *Aries*. ♉ *Taurus*. ♊ *Gemini*. ♋ *Cancer*. ♌ *Leo*. ♍ *Virgo*. ♎ *Libra*. ♏ *Scorpio*. ♐ *Sagittary*. ♑ *Capricorn*. ♒ *Aquarius*. ♓ *Pisces*.

♄ *Saturn*. ♃ *Jupiter*. ♂ *Mars*. ☉ *Sol*. ♀ *Venus*. ☿ *Mercury*. ☾ *Luna*. ♉ *Dragons Head*. ♏ *Dragons Tail*. ☊ *Part of Fortune*. ☌ *Conjunction*. ✳ *Sextile*. ☐ *Square*. ☌ *Trine*. ☌ *Opposition*.

A Table, shewing upon what Point of Equator the Moon makes a full Sea in any of the undernamed Places, with the Hours and Minutes to be added to her Southing for the true time thereof.

Here followeth the Use of the foregoing Tide-Table, viz. How it's to be used with the Moon's Southing, whereby it may be made plain, especially to those whose Employment chiefly depends on the Seas.

Suppose you desire to know what time it will be *High-Water* at *Bristol*, *March 11th. 1684.* (it being already performed on the Right-hand Page, and Third Column of the *Kalendar*, for every day this Year at *London.*) I turn to the Right-hand Page of *March*, and second Column (for through every Month in that Page and second Column, the Moon's Southing is inserted) where against the 11th. day, I find 4 hours, 0 minutes, A. the Moon's Southing in the Afternoon: Then in the Table on the back-side this Leaf, against *Bristol*, &c. 6 hours 45 min. which (as the Title directs) being added to 4 hours 0 minutes, (the Moon's Southing) makes 10 hours 45 min. So that I conclude it's exactly *High-Water* at *Bristol*, 45 minutes after 10 a Clock at Night, *March 11th. 1684.* But if the sum of the two former Numbers had exceeded 12 hours, you must have subducted 12 hours therefrom, the Residue had been the time desired. Where note, That the Tide floweth one point of the Compass more at the Spring-Tides (which are the New and Full Moons) than at the Neap-Tides (which are the first and second Quarters.) As also Land-Floods and boisterous Winds may cause some variation, but this is the exactest Rule that can be given, in regard the Moon's Southing is Calculated with Latitude.

To gain the hour and minute of the Night by a Sun-Dial, observe this Order: Repair when the Moon shineth thereunto, and see how many hours and minutes the shadow wanteth of the Line 12, which subducted from the Moon's Southing, the remainder is the time of the Night; but if the shadow falls past the twelfth Line, add the hour and minute to hour and minute of the Moon's Southing, and the Sum is the hour and minute of the Night. *This, perhaps, may prove Delightful to the Country-man.*

*Time, yea and Tides, pass swift away,
And will for no Man's Leisure stay.*

Astrological Observations for the Year 1684.

By DANIEL WOODWARD.

*Deduced from the late Prodigious Comets, the se-
mets, the several Conjunctions of Saturn and Jupiter, Eclip-
ses of the Luminaries, and Ingress of the Sun into the Æ-
quinoctial Sign Aries; which I gress is Calculated from the
Caroline Tables, Thus:*

	S	D	I	II
Longitude of Sol from the <i>Æquinox</i> ----	00	: 00	: 00	: 00
Præcession of the <i>Æquinox</i> , sub. ———	00	: 28	: 42	: 33
Longit. of Sol from the first * of <i>Aries</i> -----	11	: 01	: 17	: 27
Mean Anomaly Correspondent —————	08	: 20	: 01	: 03
Mean Anomaly of Sol 1684. sub.--- ———	06	: 12	: 47	: 56
Residue —————	02	: 07	: 13	: 07
Mean Anomaly in <i>March</i> , 1684. sub.--- ———	01	: 28	: 09	: 04
Residue. —————	00	: 09	: 04	: 03
Day 9th, Bissextile sub —————	00	: 08	: 52	: 14
Residue —————	00	: 00	: 11	: 49
Hours, 4 sub. —————	00	: 00	: 09	: 51
Residue. —————	00	: 00	: 01	: 58
Minutes 47. sub.--- ———	00	: 00	: 01	: 56
Residue 2 ¹¹ which make in time 48 ¹¹ -----	00	: 00	: 00	: 02

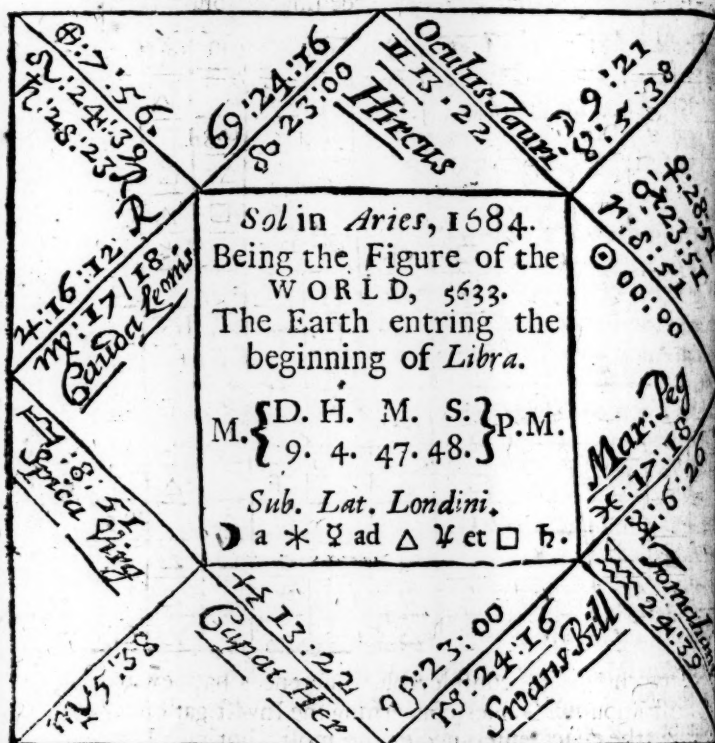

By the preceeding Calculation it appears, that the Glori-
ous Sun salutes the first Scruple of the Celestial Sign *Aries*,
in the Meridian of London. *March* the ninth 4 Hours, 47
Minutes, 48 seconds past Noon.

Equal Time.

The SCHEME follows.

Astr. logical Observations on the Year, 1684.
 The Position of Heaven at the Sun's Ingress into Aries.

GOd doth not work like Man, nor is he ty'd
 To outward means, his pleasure is his guide.
 Not Reason; *HE* that is the God of Nature,
 Can work against it, *HE* that is Creator
 Of all things, can dispose them to attend
 His Will, forgetting their Created End.
HE, whose Almighty Power did supply
 A Bone with Water, made the Red Sea dry.
 Great God of Nature, 'tis as great an ease
 For thee to Alter Nature, if thou please,
 As to Create it. Let that hand of thine
 Shew forth thy Power, and please to alter mine.

Astrological Observations on the Year, 1684.

The Speculum for the preceeding Revolution.

Notwithstanding considerable differences happen in our Astronomical Tables, concerning the Investigation, or obtaining the exact enterance of the most Glorious Lamb of Heaven, the Sun, into the Vernal Equinoctial Sign *Aries*, some of our Tables give one time, some another: none of them exactly agree in the Solar Revolution. However, I will (not minding the superiourness of our Tables, and disagreeing of our *Astronomers*) hazard my poor Conceptions of the preceeding Scheme, from the time found by the *Caroline* Tables; presuming they are built upon as good, if not the best *Hypothesis* of any extant: And by that time we have had as many *Ephemerides* Calculated from those Tables, as we have had from some of the other, I need not dispute, but they would gain far greater *Mundane Reputation*.

Now, with God's leave, I shall endeavour to unfold

Astrological Observations on the Year 1684.

my poor Conceptions of part of the Portents of the preceeding Cœlestial Scheme ; the narrowness of my Limits, and want of time, with something else, forced me to pass by many Material things, which I hope will not be omitted by him that has more Room and an abler Pen.

Upon the Cuspe of the Twelfth ascends *Leo*, the Horoscope of *Rome, Italy, Bohemia, &c.* The *Sun*, Lord of that Constellation, Posited near the House or Angle of Death ; together with the Position of *Saturn* in that Horoscope. And the *Moon*, Lady of the Twelfth therefrom, casting her afflicting Beams, must of necessity denote abundance of evil to befall those People Inhabiting those Kingdoms, Countries, and Cities, that have the Sign *Leo* for their Ascendant ; for the Twelfth is really the Angle of Sorrow and great Affliction, Imprisonment, secret Enemies, Evil Spirits, Treasons, Conspiracies, Captivity and Tribulation, of a Thousand kinds. Had not the Sign *Leo* been posited upon the Cusp of the Twelfth, the very *Transite* of *Saturn*, through that Constellation, denotes Evil upon Evil to all those Persons Resident in those Cities and Countries that have the aforesaid Sign for their Ascendant : the *Moon's Quartile*, Lady of their Twelfth, augments the Evil, therefore as *Leo* is the Ascendant of *Rome, Italy, &c.* that City in particular, and all *Italy* in general, are most in danger to be totally Subverted : Those places had once a beginning, and are no more Eternal than his Holiness, but as subject to the Influence of the Stars. *Saturn* is a Planet Natuarly Evil ; besides, he is Lord of the Sixth and Seventh. From *Leo Jupiter* hath also had his *Transite* through that Sign ; and although he is accounted the most Benevolent Planet, yet he is not so to the aforesaid People, for he is Lord of their Eighth, and hath been of late three times Conjoyn'd with *Saturn* in their Ascendant, the great Dignities of the *Sun* ; all which being put together, proves very ominous ; Nay, I dare Predict very fatal to those whom it may concern. *Saturn* began his progress in *Leo* August the 5th. 1681. and went not out (according to some *Ephemerides*) until September 26, 1683, at which time he entred *Virgo*, but considering his Tardity, he continued

Astrological Observations on the Year 1684.

passed not long there, for by a Retrograde motion, he made his Entrance *February 17th. 1684.* (*viz.* this Year) into *Leo* again, even as though he would Reiterate to the world what he formerly denoted. The 16 of *June* he leaves *Leo*, and takes his progress into *Virgo* again, from which time he *Transits* that Sign no more till near 30 Years are expired, *viz.* about the Year of our Lord, 1713. for he is always near 30 Years finishing his *Zodiacal* Perambulation or Peragation through the Twelve *Celestial* Signs.

Upon the Cusp of the Eleventh is posited *Cancer*, the Ascendant of *Holland, Scotland, York, &c.* The *Moon*, Lady thereof, in her Exaltation in the Ninth, within the Orbs of the *Sextile* of *Mercury* and *Trine*, Aspect of *Jupiter*, two Benevolent Configurations, which denotes for the most part, a happy and Healthful Year to those Inhabitants under the Sign *Cancer*, much Joy, great Friends, Comfort and Content, the end of Strife and Wars: Besides, it signifies much Trading and Voyaging by Sea to the Remote parts of the World, and many Fortunate and happy Returns to their Merchants; few of their Natives to undergo much trouble, Piety and Ingenuity seem much to abound; in short, generally the Year is likely to those People to be Prosperous, if the *Quartiles* of the *Sun, Mars, and Venus*, and the four several *Eclipses* happening in their Ascendant, and in the Sign opposite thereunto, *viz. Capricorn*, do not infinitely frustrate and abate the rehearsed good, truly I doubt it will; however, more Good than Evil is really signified to befall them.

Upon the Cusp of the Tenth *Culminates Gemini*, the undoubted Horoscope of *London*; there are Culminating likewise, two fixed Stars of eminent Note, one called *Herens*, or the *She-Goat*, the other *Oculus Tauri*, of the *South Eye* of the *Bull*; the first of the Nature of *Mars* and *Mercury*, the second of the Nature of *Mars* onely. Poor *Mercury*, Lord of their Horoscope, looks very dejectedly, he's not only in his Detriment and Fall, but in *Opposition* to a Retrograde *Jupiter*; which being truly and duly considered, Prognosticates generally, but indifferent Prosperity and Success to the City of *London*, and her innumerable Inhabitants; yet the Culmination of
C 4 their

their Ascendent, denotes Glory, Honour, and Renown, much unity and sympathy, between the People and their King, or chief Majestates; which I hope may prove really true. 'Tis a blessed thing to live in peace, where the people are willing, God always lends his helping hand. The Scripture saith, *A House divided cannot stand*; the same may be understood of a City or Kingdom. *Mercury*, the significator of *London*, in Opposition to *Jupiter*, Lord of their seventh, and he in Quartile to their Ascendent, signifies to that City, many molestations, her Quiet and Prosperity much frustrated, by a contentious seemingly Religious Generation. For *Jupiter* signifies a people outwardly Religious, fill'd with Craft, and Worldly Policy. ——— And notwithstanding their aspiring souls, 'tis doubted they will be involv'd into many contentions and troubles; yet the strong Reception between the former significators, and the Moons being in *Sextile* to the one, and in *Trine* to the other, will much abate (I hope) the impending Judgment; Besides, she is Lady of their House of substance, strong in her exaltation. Therefore whatever hath already happened, or may happen for the future, that City shall not be totally impoverished. Nay, in the conclusion, she will obtain and keep her Liberty, though she pay for't. I believe it's known to all *England*, that the Honourable City of *London* hath always of late, (especially) been pester'd and fill'd with implacable Enemies.

Upon the Cusp of the ninth, Descends *Taurus*, the Ascendent of the Kingdoms of *Ireland*, *Poland*, *Russia*, &c. assisted by the presents of the Moon in her exaltation, the *Sextile* of *Hermes* and *Trine*, of benevolent *Jove*. The Position of the Horoscope of those Kingdoms upon the ninth Angle, presages those people to have change and troubles in Religion, and Religious Affairs; yet it inclines them to Piety and Godliness, and to be much given to undertake long Journeys, and Voyages beyond sea; It puts many of them upon the study of arts and sciences, and the sending of Ambassadors to strange and foreign Princes, &c. The *Trine* of *Jupiter* Augments the business, and gives them success and prosperity. *Mercurys Sextile*, adds much to the matter, and confirms their

Astrological Observations on the Year, 1684.

their Industry, and Ingenuity. But on the other hand, the worst that is denoted this Year to the former Inhabitants, (except something of the Operation of the Influence of the Triple Conjunction of the Superiours, and of the late terrible amazing Comet) is the square of *Saturn* to their Horoscope; and *Venus* Lady thereof, afflicted by the presents of *Mars*, in her detriment in the eight Mansion of the Figure, and twelfth Sign from their Ascendent. Yet I presume the former Balsum will be of sufficient force, to heal and scicatrize the wound this latter may cause. However, many of their *Inhabitants* will Dye, and suffer *Inprisonment*, &c many strange troubles, yet one day the Sun will shine on them again.

Upon the Cusp of the eighth, Descends the Cœlestial Sign *Aries*, the absolute Ascendent of *England*. *Mars*, Lord thereof, strong and potent, posited in his delightful Mansion, *Trining Saturn*, and in Conjunction with the lesser Fortune *Venus*, who is likewise projecting her benevolent Beams to *Saturn*. What shall I say? here are no less than three of the seven wandring Stars, posited in *Englands* Sign, or Horoscope, at this very Solar Revolution; which I must tell you, is a position not contemptible, but of very eminent signification to *Great Brittain*, and her Inhabitants in general. By what I have said, you may perceive that our *Brittish Island* stands safe and secure, not caring a Rush for all the Attempts, and Devillish Conspiracies of her Enemies. Providence will not suffer this Kingdom to be brought to ruine and total subversion; whatever hath been subterranealy acted, God Almighty hath rais'd Instruments to bring it to publick view. Lord, not a happier Nation under Heaven (could the *Inhabitants* like loving subjects) live in peace and unity within themselves. No forreign King or Prince, dares attempt Victory over us; the *English* will not indure to be curb'd, or baffled by any people in the whole Universe, notwithstanding the presumption of some of late, but he that hath set them at work, hath payed them their wages; pride goes before, and shame followeth after. The Devil had been a Saint in Heaven, had it not been for the sin of pride and presumption — Friends, be not timorous, *Engl.* will be *Engl.* still, and within some few Years

Astrological Observations on the Year, 1684.

Years 'twill be the most flourishing Island of *Æurope*, viz. after our Learned Physitians have purged the grosseness and filth of the Nation. *Mars*, *Englands* Guardian, hath the greatest power and strength Essential, of any Planet at our Revolution; therefore when we are to consider the Condition or State of *England* Astrologically, we are to know the Essential power of *Mars*, as being Lord of *Aries*, the undoubted Ascendant thereof. *Binatus* saith, *Cui Clima præsit quilibet Planeta, et scire esse illius, quoniam accidentia Universalia Climates erunt, secundum quod fuerit esse Planeta qui Præsit ei.* Have Respect (saith our Author) to the Planet that governs every Climate, and know in what state he stands: because the general Accidents of that Climate, shall be according to his existence. Wherefore, considering the Essential strength of *Mars*, the general Affairs of *England* will be carried on more smooth, than Thousands at present. Suppose the Fame, Reputation, Honour, Glory, and Dignity, of the most Eminent and Illustrious Persons of the Nation, seem much to advance——the Inclinations of the Commonalty better composed; Nay, all the Subjects in general seem ready to stand by their Prince with their Lives and Fortunes,——Yet notwithstanding all this, the Year is like to prove very Mortal, especially in *England*. We may heartily pray to God, to preserve us from the Plague, or any Epidemical Distemper. If it pleaseth the Almighty to send it this Year, I greatly fear 'twill be violent and raging,——such a scourge for Mankind, I doubt is approaching; but God's time is not Man's.

Secondly, *Of the Eclipses this present Year.*

Four times (some skill'd in *Astronomy* suppose Five) this Year, the Inhabitants of the Terrestrial Globe will have the Luminaries, or Lights of Heaven, obscured from their sight, viz. Twice the Sun, and as often the Moon: whereof but three of them will be visible in our *Brittish Hemisphere*.

The first Eclipse will be of the Sun, the sixth day of *January*, about six of the Clock in the Afternoon, in the 26 Degree of the Cælestial Sign *Capricorn*, but not to be seen of us in *England*, because the Sun at the time of its Celebration, will

be

Agrological Observations on the Year, 1684.

be under our Horrison. However, the *Eclipse* will be great, eleven Digits of the Suns Body will be obscured.

'Twill be visible to those that Inhabit in the *West-Indies*. The position of Heaven at this *Eclipse* in the Meredian of *London*, stands thus : The beginning of the Sign *Taurus*, Culminates the middle of *Leo*, Ascends our Horrison. *Mars*, the Planet for *England*, is posited upon the Cusp of the eighth House, lately seperated from the Opposition of *Saturn*, and applies to the Opposition of *Jupiter*. *Mercury*, in Conjunction with the Sun and Moon, in the sixth *Venus*, near the seventh *Iupiter*, casts his Trine to both the *Sun*, *Moon*, and *Mercury*; yet for all, 'tis but an indifferent position to begin the Year. The *Eclipse* is great, and Celebrated in an ill Mansion of Heaven : and although not visible to *England*, we shall feel some of the Effects. *Eclipses* are ever the *Prodromi* of troubles to the World, yet those of the Sun, particularly presage Evil to Kings, Princes, and Noblemen ; both those *Eclipses* of the Sun, which will happen this Year, are very great, so will be the last of the Moon, therefore their Effects are the more considerable ; But being limited, I cannot expatiate on their Portents.

The second *Eclipse* will be of the Moon, the 17 of *June*, near three of the Clock in the Morning, Celebrated in the sixth Degree of *Capricorn*, visible to *England* ; yet the *Eclipse* will be but small, but truly worthy of an *Astronomical* Observation. The 25 Degree of *London's* Horoscope, Ascends our Horrison, and about the 9 Degree of the Cælestial Sign *Aquary*, meditates the highest Point of Heaven, all the Planets (except *Mercury*) are Anglar ; *Mars* and the *Sun*, in Coniunction in *Cancer*, the Ascendent of *Holland*.

The third *Eclipse* will be of the Sun, the 2 d. of *July*, in the 22 Degree of the Cælestial Crab, about three of the Clock in the Afternoon. 'Twill be a great *Eclipse*, two thirds of Suns Glorious Body, will be darkened from our *English* Inhabitants. *Argol* in his *Ephemerides*, makes this *Eclipse* to be total. At this *Deliquium Scorpio*, ariseth *Saturn*, *Iupiter*, and *Venus*, in the Sign *Virgo*, Culminate. *Mars*, *Sol*, *Mercury*, and the *Moon*, are in *Cancer*, the *Eclipse* happens in the ninth Angle of the Heavens.

The

Astrological Observations on the Year, 1684.

The fourth Eclipse will be of the Moon, happening *Decem- ber* the eleventh, about eleven of the Clock at Night, there- fore not invisible to us in England; Besides, the Eclipse will be great, almost total, and will be celebrated in the very first Degree of *Cancer*. At this Lunar defect *Gemini*, the Ascendant of London, is on the Mid-Heaven, Saturn is just above the Horri- son: about the 20 Degree of *Virgo*, Ascends Mars & Jove, in Con- junction in the 2d. Venus is Cadent in *Sorpio* her detriment. Mer- cury is just separated from a Quadrant of Saturn in the 4th. In Sagitary the defect will be Celebrated in our Medium Coeli.

Now of these four Eclipses, two of them happen in the Earthly Trigon, and two in the watery; the first of the Sun, and first of the Moon. In *Capricorn*, a Sign of the Earthly Trigon, or Triplicity; the last of the Sun, and last of the Moon, in the Watery Trigon. The two first Eclipses pre- sage (because they fall in the Earthy Trigon) Destruction of the fruits of the Earth, scarcity of Corn and Fruit, Famine, and Danger of a raging Pestilence, extream Colds, Frost, thick and foggy weather, unwholesome Air, Consumptions and Diseases, proceeding from melancholly, tedious Quartan Agues, Banishment, Poverty, Misery, Death of great Cattle, and a Mortality of Old People; besides, they stir up much malice, strife, & debate, & many tedious Law-suits.

The two last Eclipses foreshew troubles at Sea, Storms and Tempests, snow or fleet according to the season, many Innundations; and overflowing of the Sea-bancks. They likewise signifie great Destruction of Fish and Fowl, Mortality among the common people, Tumults, and Bloody Wars, &c. The persons Inhabiting those Kingdoms, Coun- tries, and Cities, assigned to the Watery Trigon, *Viz.* those Kingdoms, &c. under *Cancer*, *Sorpio*, and *Pisces*; as also those under the Earthy Triplicity, *Taurus*, *Virgo*, and *Capri- corn*, are most concerned in the effects of these Eclipses. The places passive are *Zealand*, *Granado*, *Holland*, *Constanti- nople*, *Scotland*, *York*, the City of *Oxford*. *Saxony*, *Macedonia*, *Augusta*, cum multis aliis. All Towns and Places, that are situate near the Sea, will severely suffer, great damnage to the Trade of Fishing, or prejudice to Fish-er-Men in ge- neral. 'Tis observed by our Astrological Authors, that ne-

Astrological Observations on the Year, 1684.

ver an Eclipse happened in any Age of any considerable Magnitude, but there succeeded many Evils and Calamities to Man-kind; As you may find, if you Retrospect and Consult Antiquity, or the Histories of preceeding Times.—— For 'tis really the Opinion of the most learned in this Science, That the God of Nature forewarns the sinful World of the great Revolutions of *Empires, States, and Kingdoms*; Of the Death of *Emperors, Princes, Governours*, and other Great and Noble Men; Of *Heresies, Sects, Schisms*, and *Seditious* in the Church, *Alterations of Laws and Customs*; Of *Drought, Innndations of Rivers*; Of *Wars, Famine, Plague and Pestilence*. Nay, the *Vicissitude* of all things sublinary by the Eclipses of those Glorious Sights.

Thirdly, *Of the Conjunctions of Saturn and Jupiter.*

As these two Planets are the highest of the wandring Stars, and slowest of motion; so are their Conjunctions of more concern to the World (because their Influence Operates very long) than Eclipses, Conjuctions, or any Configurations of the other Caelestial Bodies. Some parts of Europe, is likely to be turn'd Topsy Turvy; the effects of the late Triple Conjunction of the *Sup'riours*, will operate on the East, and North-East parts of the World, to purpose before 20 Years are expired, the rather, because 'twas ushered in with two such eminent Comets; the effects will be the more significant, in regard there hath not happened (all things considered) the like since the Creation of the World, both Chxrch and State will be new modell'd, and many strange and rare thing will be discovered.

These Conjunctions of Saturn and Jupiter, are term'd by Astrologers, Great, Mean, or Lesser: but the true time of Incidence, is scarcely ever found. Yet as near as could be obtain'd by the *Caroline Tables*, you had the whole Calculation of the first Conjunction in my last years Almanack, of the three we have had since the 23 of October, 1682. Wherefore observe what follows.

First, Great Conjunctions are those that are made after a full Period, and Revolution of the whole Circle; that is, when Saturn and Jupiter have made their several Conjunctions through the four *Triplicities*, and do come and conjoin again in the first & Fiery Triplicity, *Aries, Leo, Sagitary*, which is perform'd in the Revolution of 794 Years, 113 Days, 16 Hours.

Secondly,

Astrological Observations on the Year, 1684.

Secondly, Mean Conjunctions are such as are made after *Saturn* and *Jupiter*, have left one *Triplicity*, and conjoyn in the *Triplicity* that follows: as when they leave conjoyning in the fiery *Triplicity*, and conjoyn in the Earthy. Or when they leave conjoyning in the Earthly *Triplicity*, and conjoyn in the Airy. Or when they leave conjoyning in the Airy *Triplicity*, and conjoyn in the Watery, which is the last *Triplicity*; and this is accomplished in the Revolution of 199 Years, 216 Days, 10 Hours.

Thirdly, Lesser Conjunctions of *Saturn* and *Jupiter*, are those which happen in Signs of one and the same *Triplicity*, which are always Celebrated once, in the space of about 20 Years, or rather in 19 Years, 112 Days, and sometimes in 19 Years, 124 Days, or 136; by which you may see the Superiors make ten Conjunctions in each particular *Trigon*, before they remove, and enter by Conjunction into the *Trigon* next following; and so by consequence, they are near 200 Years finishing their Errand, to change their *Triplicity*; which being twice duplicated, amounts to almost 800 Years, before they can compleat their Revolution through the four *Triplicities*, or twelve *Zodiacal Constellations*. Yet notwithstanding, those persons which have endeavoured by Calculation to find the exact distance of time between each Conjunction, discover such variety therein, that no certain Rule can be made, it must be perform'd only by Calculation. This I thought good to mention, because many Ingenious persons may see this, that may not have Books treating particularly of things of this Nature.

To conclude, That as I am an *Astrological Professor*, and a *Practitioner* in its several parts; So I dare undertake to teach the same to any *Gentlemen*, that desire to understand it. To wit,

First the *Horary* part, shewing the method of Resolving all manner of Questions belonging to the Body, or Estate of Man. As Life, whether long or short? Rich or Poor? What part of the Life is like to be most prosperous? What part of the World, City or Country, is best to live in? And to be short, all other legal demands, whose Solution depends on, or is contain'd within the Perimeter of this sublime mysterious Science.

Secondly,

Astrological Observations on the Year, 1684.

Secondly, The part *Genethliacal*, shewing the manner of rectifying, directing, and passing Judgment on Nativities; wherein is naturally foreseen the most Remarkable Accidents that may happen, during the Race of Man's Life. Shewing likewise how to Calculate the Longitude, Latitude, Declination, and Ascension of the Planets.

Thirdly, The Judgment of the World, shewing how to Calculate and Judge an Annual Revolution, Compose Monthly Observations, the Calculation of Eclipses, and to give the signification of the same; with the Portents of Comets, Blazing-Stars, or any Eminent Configuration of the Cælestial Bodies; the rising, southing, and setting of the Moo, nor any of the wandring Stars. Together with the use of the Globes, Cælestial and Terestial.

Pulchritudo Caliest Gloria Astrorum.

Lastly, As I am a *Professor of Astrology*, so I am of *Physick*, and have always Medicaments ready prepared and fitted for the Cure of most Diseases Cureable, incident to the Bodies of Men, Woman, and Children; proceeding from what cause or causes, or of what kind, nature, or quality, soever: But especially of a Famous Cordial Pill, whose Power, and wonderful Operation is so effectual, that it hath not its equal in Rooting out, and Curing Chronical, and the most difficult Distempers, for which this Pill may be truly term'd an Universal Medicine, as being fitted to all Ages, Humours, Sexes, and Constitutions. Now really published for the good of my Fellow Branches, and Members of the Creation, that may possibly stand in need of the Rich and Splendid Vertues of these Medicaments.

First, My Cordial Pills, known to be as excellent and as certain a Medicine as any in the World, to assist and fortify decaying Nature; for what-ever unnatural, or destructive matter lies in the Body of Man, these Pills will soon drive it out, and in its place Constitute the Body healthful. Having Cured the Dropsie, extream pains of the Gout, Gripping in the Guts, Green-sickness, Exulteration of the Kidneys, bad Digestions, all manner of Surfeits, Convulsion-fits, Pestilence, Pimples or Flushings in the Face, Falling-sickness, -
fore

Sore Eyes, Pain, Inflammation, and Obstructions of the Spleen, Fever, Obstructions of the Liver, Fistula's, Leprosie, Tremblings, Palpitations of the Heart, Fits of the Mother, and Vapours from the Spleen, Jaundies, Stone, and Gravel in the Kidneys, Stone in the Bladder, King's-Evil, and for the Scurvy, they are as good Pills as any. In short, they are an Antidote against Infectious Diseases; scarce an Infirmary (with God's permission) is able to withstand their Vigour. Besides, they will Corrupt, (if you keep them from moisture) tho' kept an 100 Years, therefore beneficial for those that sail to the *East* and *West-Indies*, for those that live in the Country far from able Physicians. Wherefore I advise such not to be wanting of some of these Pills in their Houses, being in a manner Physick upon all occasions. *Price half a Crown the Box.*

Secondly, My Unguent for the Worms, which never fails to kill all sorts of them in the Bodies of Men, Women, and Children. Really it Vermin destroy more than Sword, or Plague, for they cause many Diseases; as the *Vertigo*, *Megrim*, *Falling-Sickness*, *Consumption*, *Rickets*, *Convulsion-Fits*, *Stranguries*, &c. you may have of it from one Shilling worth, to what you please. Truly, this Ointment hath preserved Thousands that have been very weak, and in deplorable conditions, therefore it would be convenient for people that have Children, to have some of it *always* in readiness, to preserve them from those devouring creatures.

Thirdly, My *Balsamick Pills*, which Cure Melancholly, Head-Aches, poplexy, Frensy, Madness, Epilepsy, Dropsy of the Brain, Vertigo, Lethargy, Swimming, or noise in the Head, Dullness of Hearing, weak Memory, Giddiness, weak or Sore Eyes, Deafness, or Druming noise in the Ears, Head-Swelling about the Neck, Throat, Jaws, or Gums, want of Smell, Taste, Tooth-Ach, Kings-Evil, &c. Truly, they are as excellent Pills, as possible may be prepared, to correct what Disease soever offends that part of Man, the Head. Besides, they Kill Worms, and are very effectual against Piles, Coughs, Catarrhs, Cholick, Convulsions, Rickets, Scurvy, Gout, and the Diseases incident to Women, *viz.* Barrenness, Green Sickness, &c. Strengthen weak backs, and reduce the Womb to an excellent in order to Procreation; which induces many of the Female kind to use these Pills. *Price two Shillings the Box.*

Fourthly, My *Pectoral Syrup* of an admirable Vertue, to open the Obstructions of the Stomach and Lungs, as Colds, Coughs, Pilestick, and shortness of Breath, and is an excellent Medicine for Consumptive persons; for it infinitely strengthens the Lungs, Breasts, and Stomach, and finally procures a good Appetite. *Price two Shillings each Bottle.*

Other things should have followed, but I have not Room to insert.

From my House at the *Globe* in *Arundel Street*, by *St. Clements Church* in the *Strand*, where any person, living either in *City* or *Country*, may have any of these, or other Medicines, with Printed Directions how to use them, from Morning, till Eight at Night.

D. WOODWARD.
